

for healing the body naturally!

Children/Focus™ patch is a **NON-DRUG** product that was developed as a complementary therapy program that is accepted by Doctors and Practitioners as an aid to support and restore the body's energetic function.

Children/Focus: For children with focus issues or attention deficit hyperactivity disorder (ADD or ADHD), the world can be a confusing and overwhelming place. Their brains frequently flit from subject to subject, or they become entranced by one compelling thing. Genetic factors, prenatal toxins, drugs and alcohol, as well as prematurity put children more at risk for attention deficits. Yet ADHD, or Attention Deficit (with or without Hyperactivity) Disorder, is controversial, since definitions and testing procedures for the disorder are vague and vary greatly among different communities and professionals. Moreover, the idea of giving one's child a psychoactive drug is often very worrisome to a parent. Children/Focus: This patch is designed to support balanced brain, digestive and nervous system function for children and adolescents. Consider using when experiencing: ADD/ADHD, autism symptoms, lack of focus, lowered concentration and attention, brain won't slow down, relaxing both brain and body, excessive stress and anxiety, and to promote clear thinking.

Use the Children/Focus patch when a child experiences; Lack of Focus, Lowered Concentration & Attention, ADD/ADHD Symptoms, Brain Won't Slow Down, Excessive Stress & Anxiety.

The patch or 'bio-energy' patches are made to rapidly promote and activate the necessary resources to optimize body and brain function, restore missing cell communication, and accelerate the body's natural ability to heal itself.

Symptoms of ADHD

The symptoms of ADHD include inattention and/or hyperactivity and impulsivity. These are traits that most children display at some point or another. Digestion also seems to play a crucial role for developing young children in the evaluating of brain balance and behavior.

Adults also can have ADHD; in fact, up to half of adults diagnosed with the disorder had it as children. When ADHD persists into adulthood, symptoms may vary. For instance, an adult may experience restlessness instead of hyperactivity. In addition, adults with ADHD often have problems with interpersonal relationships and employment.

Proper Placement

Place the Children/Focus on the left side of the body. The left side accepts energy far better than the right side. Please follow directions that are stated below for best results.

Children/Focus™

Instructions: Children/Focus patch is to be applied to the body, (left shoulder) to enhance concentration and mental focus. Made to last for 3 days, then discard.

Apply another patch and wear it for additional 3 days to enhance mental focus.

Repeat this procedure for 30 days to improve mental focus.

In some cases, the patch can be applied on clothing such as inside of back pocket.

If needed, continue with procedure for an additional 60 days.
