**DRUG FREE PATCH,  
Just Pure Natural Energy!**

*FOR INCREASED CANNABIS BENEFITS*

Made in the U.S.A. Patent Pending – AlphaBio Centrix, R&D

### Proper Placement

Place the Relax patch on the upper left side of the body for subsiding medical issues. The benefits are many. This patch is made to be worn for 3 days. The patch is programmed to enhance your interaction with the experience of using medical cannabis.

The **Relax Patch** has been infused with the frequencies of medical cannabis (CBD) to support the way the brain and body handle stress, pain and long term chronic medical illness. You can wear the Relax patch when you consume medical cannabis for heightening the psychoactive and physiological effects, which can include heightened mood or euphoria, relaxation use of medical marijuana, as long as it remains in the range of medical benefits only.

Patients don't simply use cannabis to feel good. Instead, laws that authorize marijuana use for medical purposes work on the belief that certain symptoms and diseases can be best treated with marijuana -- just as two Tylenol may help someone's headache. The cannabinoid (CBD) can serve as appetite stimulants, and have some analgesic effects, and may be helpful treating chronic pain or vomiting and nausea caused by chemotherapy. This non drug patch works with the treatments of cannabis, which assist in easing symptoms of AIDS patients or any painful, chronic, long term illness and is considered a complementary therapy.

Use the Relax patch in conjunction when experiencing: sleep deprivation, mood swings, learning, memory problems, and physical arousal. Mood swings are the result of dealing with stressful and/or unexpected situations in daily life.

These statements have not been evaluated by the Food and Drug Administration.  
This product is not intended to diagnose, treat, cure or prevent any disease

### Relax™

**Instructions:** Relax patch is to be applied to your body, (left shoulder) to enhance the benefits of medical cannabis patients.

Made to last for 3 days, then discard. Apply another patch and wear it for additional 3 days to reduce the symptoms of imbalances.

Repeat this procedure for 30 days or until symptoms have diminished.

*If needed, continue with procedure for an additional 30 days to reduce stress and anxiety.*

**AlphaBio Centrix, Research and Development has been offering this remarkable technology to many health care providers from Medical Doctors, Acupuncturists, Naturopaths, Physical Therapists, Chiropractors, Nutritionists and even Pharmacists. The products we develop and market are the results of our research team of engineers who have established a higher standard in energetic wellness products. These bioenergy patches, used exclusively by medical doctors and therapists across the country are now available to medical cannabis dispensing facilities.**

**We are now offering the Relax patch to be used in conjunction with Medical Cannabis.**

**Latest Research:**

For people living with chronic pain, it can be hard to sift through Web sites and blogs to uncover solid scientific facts. A useful starting place for learning about the latest research into medical marijuana use in pain management is the Center for Medicinal Cannabis Research, a department within the University of California, San Diego.

In 2007, results were published from two important studies on cannabis' effects on pain management. The first, led by researchers at San Francisco General Hospital, looked at how smoking marijuana affects HIV-related peripheral neuropathy — chronic pain caused by injuries to the nerves that supply feeling to the hands and feet. Study participants were divided into two groups, one that smoked real marijuana three times a day and one that was given a placebo cigarette that contained no tetrahydrocannabinol (THC), the active ingredient in marijuana. The trial showed that the group that smoked real marijuana had a 34 percent reduction in pain, while the control group reported only a 17 percent reduction.

“Pain is one of the major functions of the body's endocannabinoid and cannabinoid receptor systems, so it makes sense that cannabis is useable for pain syndromes,” says Donald Abrams, MD, professor of clinical medicine at the University of California, San Francisco, who led the study on cannabis and HIV-related neuropathy.

The Relax patch addresses several different issues, which translates into a non-transdermal, no chemicals, drug-free product that just emits natural energy to the person who wears them. This new technology is called; “Bio Energy Synthesis Technology”. The patch is charged with bio-frequencies; reducing stress associated with pain, this is the same frequencies that travel through our body twenty four hours a day, seven days a week.

Our body is receptive to this subtle energy and travels through our body, providing energy to receptors that are picked up by the skin, and the nervous system. The Relax patch delivers a heightened mood or state-of-mind, which seems to have beneficial interactions when taken together with medical cannabis.

Doctors and healthcare providers have been using this patch as a complementary therapy for many years and have found that most people noticed a positive and unexpected result from the combination of using medical cannabis. Most patients opt to medicate using cannabis in its natural form, as opposed to concentrated or synthetic versions. Herbal cannabis and its extracts can enable more control and better judgment of dosage and can also impart fuller range of cannabinoids.
