

*for healing the body naturally!*

Prostate Care patch™ is a product that was developed as a complementary therapy program that is accepted by Doctors and Practitioners as an aid to support and restore prostate function.

*Made in the U.S.A.*

## Men's Health

Enlargement of the prostate is not a malignant condition, but it does put pressure on the urethra and can create a number of urinary complaints such as frequent urination, urinary urgency, the need to get up at night to urinate, difficulty starting, a reduction to the force of the urine stream, terminal dribbling, incomplete emptying of the bladder and even the inability to urinate at all. If left unchecked, benign prostatic hypertrophy can cause serious problems over time including urinary tract infections, bladder or kidney damage, bladder stones or incontinence.

### What Is the Prostate?

The prostate is a small gland in men that is part of the reproductive system. It's about the shape and size of a walnut. The prostate rests below the bladder and in front of the rectum. It surrounds part of the urethra, the tube that carries urine from the bladder. The prostate helps make semen, which carries sperm from the testicles when a man ejaculates.

### Enlarged Prostate

As a man ages, the prostate can grow larger. When a man reaches the age of 40, the prostate gland might have increased from the size of a walnut to that of an apricot. By the time he reaches the age of 60, it might be the size of a lemon. Because it surrounds part of the urethra, the enlarged prostate can squeeze the urethra. This causes problems in the passing of urine. Typically, these problems passing urine don't occur in men until they are age 50 or older. They can, though, occur earlier.

An enlarged prostate is also called benign (noncancerous) prostatic hyperplasia or BPH. It is common and cannot be prevented. Age and a family history of BPH are risk factors. Eight out of every 10 men eventually develop an enlarged prostate. About 90% of men over the age of 85 will have BPH. About 30% of men will find their symptoms bothersome.

The Prostate Care patch is designed to reduce the symptoms of an enlarged prostate, such as, trouble starting to urinate or urinating freely, feeling that the bladder is not empty after urinating, feeling a sudden urge to urinate, having to stop and start repeatedly while urinating, having to strain to urinate, just to name of few.

## Proper Placement

Place the prostate patch on the left shoulder of the body. Your body accepts energy far better than the right side. Please follow directions that are stated below for best results.

## Prostate Care™

**Instructions:** The prostate patch is to be applied to your body, (left shoulder).

It was developed to encourage a healthy prostate.

Made to last for 3 days, then discard. Apply another patch and wear it for additional 3 days to encourage prostate wellness.

Repeat this procedure for 30 days to reduce enlarged prostate symptoms.

*If needed, continue with procedure for an additional 60 days.*

Over time, the bladder muscle may gradually become stronger, thicker, and overly sensitive; it begins to contract even when it contains small amounts of urine, causing a need to urinate frequently.
