

for healing the body naturally!

Fibromyalgia patch™ is a product that was developed as a complementary therapy program that is accepted by Doctors and Practitioners as an aid to support and restore the body's energetic function.

Made in the U.S.A.

Is Fibromyalgia a Form of Arthritis?

Fibromyalgia is considered an arthritis-related condition. However, it is not a form of arthritis (a disease of the joints) since it does not cause inflammation in the joints, muscles, or other tissues or damage them, but rather a muscle disorder. But fibromyalgia can (like arthritis) cause significant pain and fatigue, and it can similarly interfere with a person's ability to carry on daily activities.

Whom Does Fibromyalgia Affect?

Fibromyalgia affects predominantly women (over 80% of those affected are women) between the ages of 35 and 55. Less commonly, fibromyalgia can also affect men, children, and the elderly.

It can occur independently or can be associated with another disease, such as systemic lupus or rheumatoid arthritis.

Fibromyalgia is a chronic condition that causes pain, stiffness, and tenderness of muscles, tendons, and joints. It is also characterized by restless sleep, awakening feeling tired, chronic fatigue, anxiety, depression, and disturbances in bowel function. The condition is non-life-threatening and does not cause body damage, deformity, or injury to internal body organs. The Fibromyalgia patch is programmed with pain and stress reducing frequencies, including the frequency of medical cannabis (CBD) to control pain associated with fibromyalgia. Fibromyalgia is sometimes referred to as fibromyalgia syndrome and abbreviated FMS. Fibromyalgia was formerly called fibrosis.

Managing Fibromyalgia:

Stress appears to be one of the most common triggers of fibromyalgia flare-ups. While it's impossible to eliminate all stress from your life, you can try to reduce unnecessary stress.

Determine which situations make you anxious -- at home and at work -- and find ways to make those situations less stressful. Experiment with yoga, meditation, or other relaxation techniques.

Proper Placement

Place the fibromyalgia patch on the left shoulder of the body. Your body accepts energy far better than the right side. Please follow directions that are stated below for best results.

Fibromyalgia™

Instructions: The fibromyalgia patch is to be applied to your body, (left shoulder). It was developed to reduce pain associated with Fibromyalgia. Made to last for 3 days, then discard. Apply another patch and wear it for additional 3 days to manage pain, stress and fatigue.

Repeat this procedure for 30 days to reduce pain and stress issues.

If needed, continue with procedure for an additional 60 days.

Fibromyalgia Tender Points

Fibromyalgia syndrome is a common disorder characterized by multiple tender points, widespread deep muscle pain, sleep disturbance, fatigue, and depression. The term *fibromyalgia* comes from the Latin word for fibrous tissue (*fibro*) and the Greek terms for muscle (*myo*) and pain (*algia*).

What are tender points?

Tender points are pain points or localized areas of tenderness around joints, but not the joints themselves. These tender points hurt when pressed with a finger. Tender points are often not deep areas of pain. Instead, they are superficial areas seemingly under the surface of the skin, such as the area over the elbow or shoulder.

Are tender points large areas of pain?

No. The actual size of the point of most tenderness is usually very small, about the size of a penny. These areas are much more sensitive than other nearby areas. In fact, pressure on one of the tender points with a finger will cause pain that makes the person flinch or pull back. Tender points are scattered over the neck, back, chest, elbows, hips, buttocks, and knees.

What causes tender points?

The cause of these pressure points is not known. Even though it would seem these areas might be inflamed, researchers have not found particular signs of inflammation when examining the tissue. What is known is that the locations of tender points are not random. They occur in predictable places on the body. That means many people with fibromyalgia experience similar symptoms with tender points.

Can my doctor diagnose fibromyalgia from the tender points?

Your doctor can test the painful tender points during an examination. Yet even with tender points, you need to tell your doctor about the exact pain you feel in those areas. You also need to tell the doctor about your other symptoms of fibromyalgia, such as deep muscle pain, fatigue, sleep problems, depression, irritable bowel syndrome, and more.

When a doctor tests tender points for pain, he or she will also check "control" points or other non-tender points on your body to make sure you don't react to these as well.

For a diagnosis of fibromyalgia, the symptom of widespread pain must have been present for three months. Stress appears to be one of the most common triggers of fibromyalgia flare-ups. The Fibromyalgia patch is programmed with pain and stress reducing frequencies, including the frequency of medical cannabis (CBD) to control pain associated with fibromyalgia.
