

SMART 5G SHIELD

This Product is Made in the U.S.A.

5G PROTECTION - *Fact or Fiction?*

5G RF Emissions Fact

5G cell towers are more dangerous than other cell towers for two main reasons. **First**, compared to earlier versions, 5G is ultra-high frequency and ultra-high intensity. **Second**, since the shorter length millimeter waves (MMV) used in 5G do not travel as far (or through objects), with our current number of towers the cell signal will not be reliable. To compensate many more mini cell towers must be installed. It is estimated that they will need a mini cell tower every 2 to 8 houses.

This will greatly increase our RF Radiation exposure. 1G, 2G, 3G and 4G use between 1 to 5 gigahertz frequency. 5G uses between 24 to 90 gigahertz frequency. Within the RF Radiation portion of the electromagnetic spectrum, the higher the frequency the more dangerous it is to living organisms.

An electromagnetic field is an area made up of two types of fields, an electrical field and a magnetic field. Both fields are produced when electricity (specifically alternating current) passes through a wire. So, when you plug your 5G smart phone into the wall outlet for charging, a rush of electricity charges the battery creating an electrical field. Continuous movement of electrons generates a magnetic field. You combine the two fields, and you end up with an electromagnetic field or EMF for short.

The **Smart 5G Shield** is specifically programmed on our AFG, (Accelerator Frequency Generator) to protect your body from ultra-high 5G RF frequency. – **Remember radiation from cell towers accumulate in your body for years. The Smart 5G Shield is made to be attached to the back of your cellphone or any wireless device to protect you from high-intensity RF radiation that will be in our location soon.**

The Smart 5G Shield is one and a quarter inch round with a strong adhesive back. Able to adhere to any surface. Made of a crystalline carbon material. Domed with a thin clear flexible acrylic cover for safety from any environmental damage. This product is made to adhere to the back of your cellphone for protection from 4G and 5G emissions. This product will last for (1) year.

The Smart 5G Shield attaches to the back of your cellphone

Our technology uses a patented process that incorporates a specific RF composite material. The material is made of a thin vinyl, crystalline, carbon compound. This material is used in all our products we manufacture because of its ability to receive electrical programming from our equipment.

The **Smart 5G Shield** is designed to block RF radiation from common sources such as 4G and 5G cellphones, tablets and laptops. Radiation protection can be easy with the right solution for anti-radiation to protect you and your family, and frankly, that's what we offer – using the (S5G) anti-radiation "Smart Chip" can help reduce you and your family's exposure to harmful radiation emitted by home electronics and gadgets.
